TRATTINICKIA ASPERA (BURSERACEAE) REPORTED NEW FOR SOUTH AMERICA

The *Flora of Panama* treatment for the Burseraceae by D. M. Porter (*Ann. Missouri Bot. Gard.* 57: 5–27. 1970) reported *Trattinickia aspera* (Standley) Swart to be endemic to Panama. The species has now been discovered in Colombia based on *Garcia-Barriga* 3600 from the Comisaria del Putomayo, along the Mocoa Trail between Mocoa and Puerto Limón at an elevation of 500–600 m. The report of this species for Colombia is not at all surprising, but it is unusual that its first report for South America would be based on a collection made near the Ecuadorian border and on the edge of the Amazonian basin.
